Challenge 1: Tables

- A `pdf` document uses latex under the hood to compile a `.tex` file to `pdf`.
- In latex a table is written as (see source Rmd file)

Var1	Var2
1	2
3	4

- A markdown table is written as (see source Rmd file)

Var1	Var2
1	2
3	4

- A table can be created by using `knitr`'s `kable` function as below:

```r
extab <- data.frame(Var1 = c(1, 3),
                    Var2 = c(2, 4))
knitr::kable(extab)
```

Var1	Var2
1	2
3	4

Challenges

1. `knit` this document to get a pdf output
2. Change this document output format to `html`.
3. **What happened to the table written in latex?**
4. Try writing an equivalent html table.
